AN NTT GROUPS PRODUCT

Groundwork

Site reports that write themselves, straight from WhatsApp.

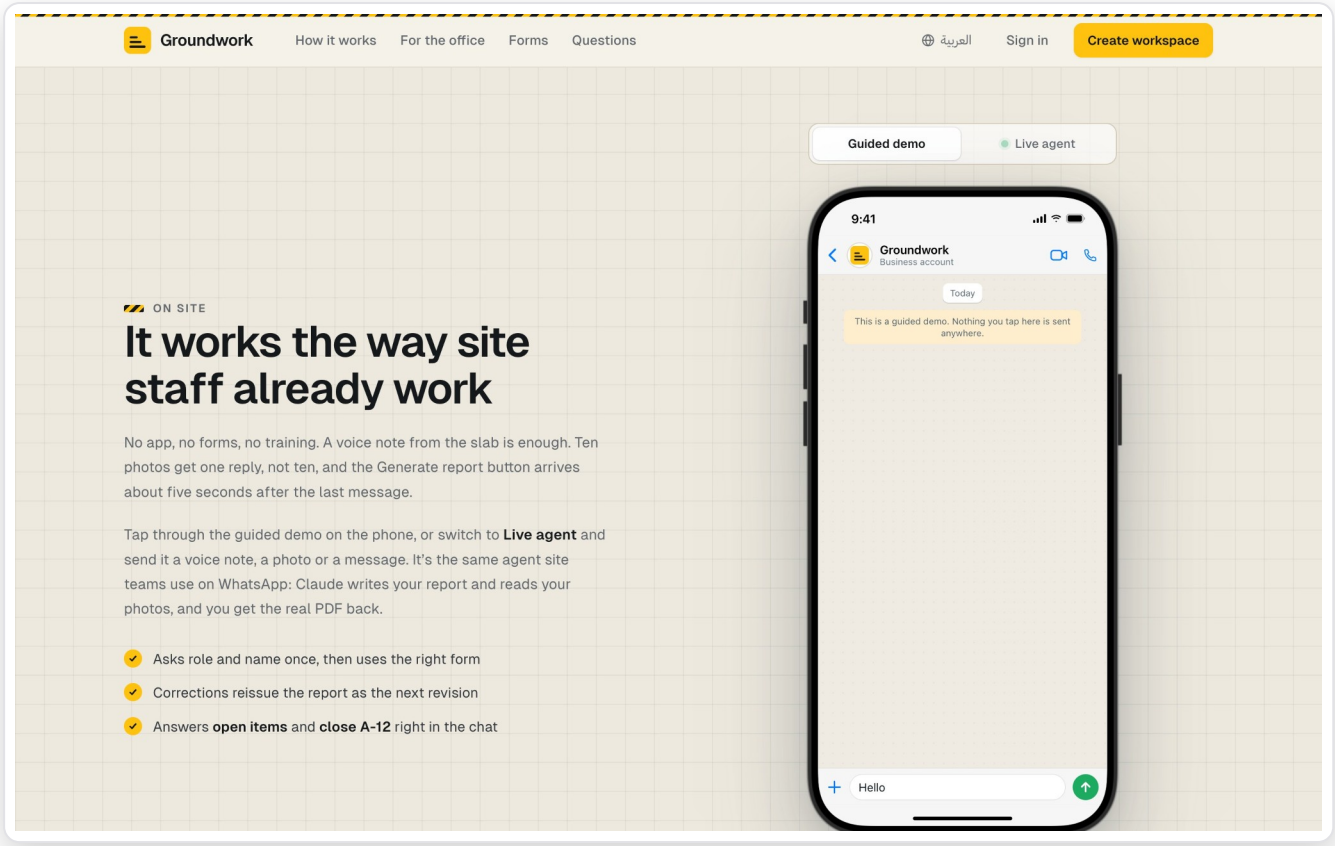

NTT Groups

THE PROBLEM

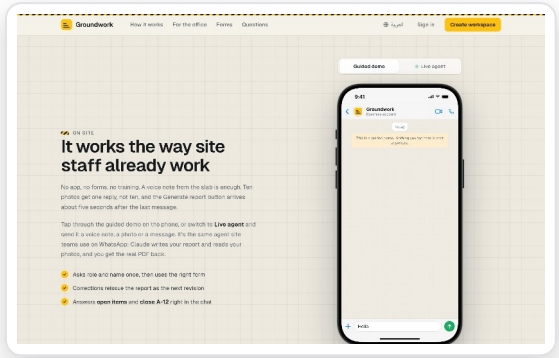

Site engineers lose hours writing reports after the work is done, and issues get lost between the site and the office.

Site staff send voice notes and photos on WhatsApp, the way they already work. Groundwork sends back a finished report and tracks every open issue until it is closed.

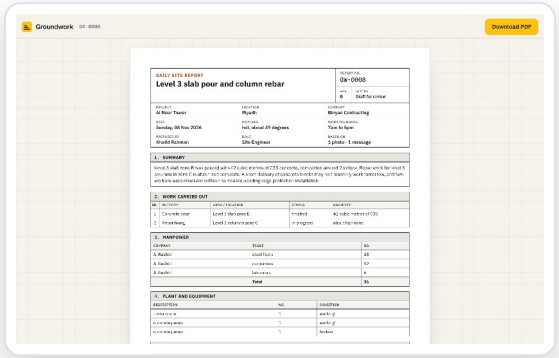

What it does

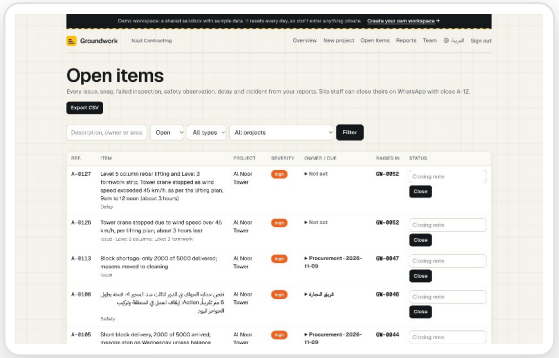

No new app

Voice notes and photos on WhatsApp are enough.

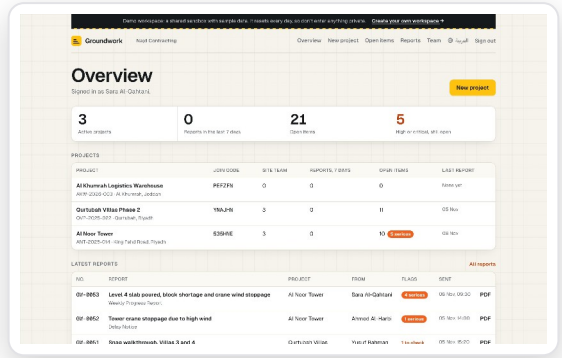

The right form every time

Daily reports, HSE, inspections, snag lists, delay notices.

Nothing invented

Figures are checked; anything unclear is flagged.

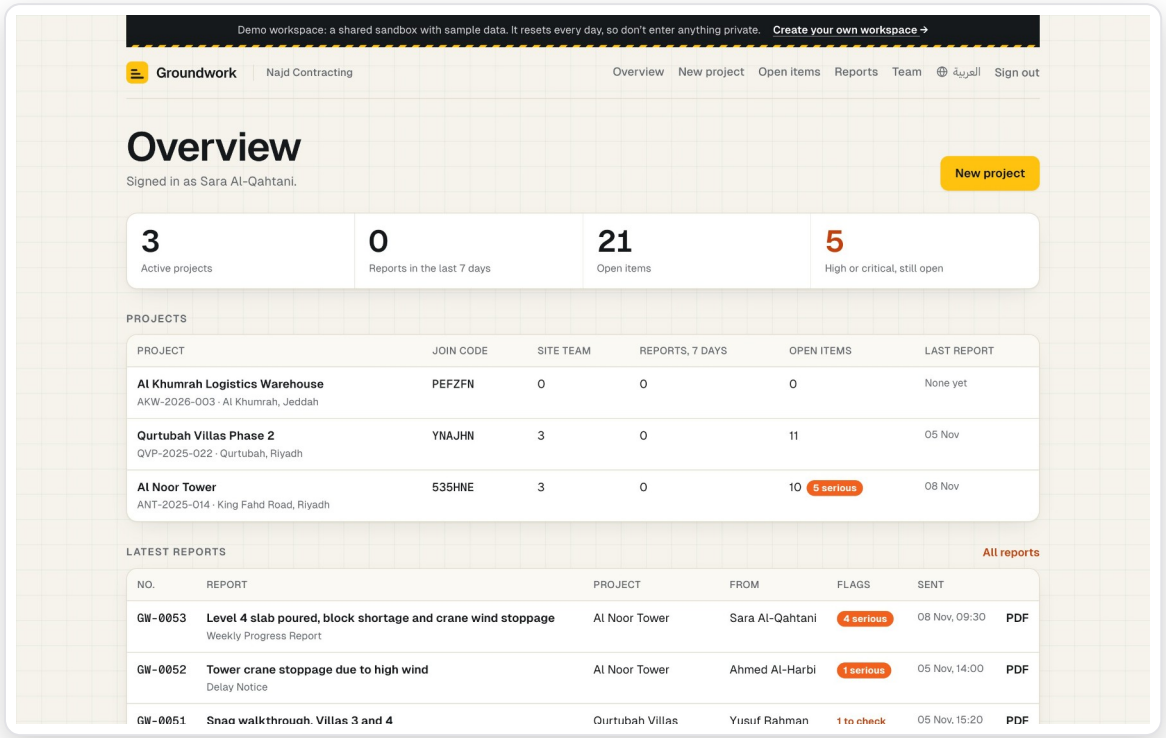

The office sees everything

Projects, open items and weekly reports in one place.

Who it’s for

- Contractors and construction companies
- Site engineers, foremen and safety officers
- Project managers and consultants

Grew out of Sitelog, the first pilot. English and Arabic.
